

**ABSTRACT OF THE DISCLOSURE**

A mounting bracket for a guide rail (12) includes first and second clips (20A, 20B) secured to a mount (18). The first and second clips (20A,20B) establish a clamping dimension (32) when they are received about a flange (38) of the guide rail (12). The mount (18) secures to a hoistway wall (14). A bolt (22) and nut (24) adjustably secure the clips (20A,20B) in a spaced relationship to each other around the flange (38). Adjustment of the clamping distance (32) provides for mounting various sized guide rails (12) with a common sized mounting bracket (10). The clips are also selectively moveable relative to the mount to facilitate plumbing the guide rail (12) within the hoistway (14).
